Identifying and contact information for the student

Student’s risk indicator and intent to leave the University.

A description of the risk indicators.
Talking points tab

Clicking on the talking points tab provides the information illustrated above.

The “activity highlights” functions as a news feed that shows some of the prominent recent activities, such as contacts, notes, and student tasks (the referral function shown above is not utilized at this time).

The “talking points” provided on this tab gives a brief summary of some of the student’s strengths and weaknesses identified on the survey.
About the student tab

This tab provides profile information about the student that is prepopulated by the university, and is not based off survey results. However, they do factor into risk indicators.
Activity tab

This tab provides information and access to all of the interaction activities (the only ones we currently use are contact, note, and student task).

This page shows all of the activities logged for the student by the user and other faculty and staff. Activities displayed will be based on the access level of the user.

The box on the left allows the user to easily navigate to find the type of information they are interested in reviewing (contacts, notes, etc.).

The boxes above the activity feed allow the user to log an activity for the selected student. (See the “Logging a Contact/Note/Task” document for more detailed instruction on logging activity.)
Survey/Dashboard tab

Dashboard tab

This page offers a wealth of information. Beginning with the Dashboard tab within this tab, the results of the survey are divided into the areas assessed, and the background color indicates the risk indicator for the area. The areas are divided into more specific focuses with associated risk indicator colors.
Dashboard details

This tab allows you to drill down to the specific questions within each factor. Having your mouse hover over the arrows on the far right will reveal the students response between 1 and 7. All questions are a 7 point likert scale with 7 being the most positive response and 1 being the least positive.
Factors

Factors are another way of dividing the areas the survey assesses. The information is divided into twenty factors, which are shown on this page with its associated risk indicator color for the student.

Clicking on the appropriate link shows the questions that comprise a certain factor, and the answer and risk indicator for the student for each question within.
Student’s Report/Usage

This page provides information about the student’s personalized report, and their utilization of it.

Clicking on the first link in the “Student’s Report” box allows the user to see the portal that students see when they log in to their MAP-Works account.

The second link allows users to view the student’s personalized report. This is the report they can see on their account, that offers assessments and suggestions based on profile and survey data.

The “student’s survey response status” shows if and when the student completed the survey selected.

The report usage function shows how many times the student has viewed their report.
Dashboard comparison

This section shows a comparison of the student’s assessment on two selected survey, as well as the type of change achieved (positive or negative) for each dimension.
Dashboard history

This section shows the dashboard for previously taken surveys.
