### Solution: Tie Breaker #1

Car A takes 9 minutes to complete the track one time.
Car B takes 8 minutes to complete the track one time.

**LCM(8,9) = 72**

It will take 72 minutes for the cars to finish at the same time.

### Solution: Tie Breaker #2

\[ y = x^2 + 1, \ x \leq -2, \ y \geq 5 \]

\[ x = y^2 + 1, \ y \leq -2, \ x \geq 5 \]

Solve for \( y = -\sqrt{x - 1} \)

Therefore, \( f^{-1}(x) = -\sqrt{x - 1}, \text{ where } x \geq 5 \)

### Solution: Tie Breaker #3

\[ \sqrt{x + 3} \leq |2x + 3| \]

First solve the equation: \( \sqrt{x + 3} = |2x + 3| \)

Square both sides to get \( x + 3 = (2x + 3)^2 \)

This results in a quadratic equation: \( 4x^2 + 11x + 6 = 0 \)

Factor \((4x + 3)(x + 2) = 0\) to get zeros -2, -3/4

The domain of \( \sqrt{x + 3} \) is \( x \geq -3 \).

Possible interval solutions are \([-3, -2], [-2, -3/4],\) and \([-3/4, \infty)\).

Check the intervals by substitution to determine that the only solutions are: \([-3, -2]\) and \([-3/4, \infty)\).
