Observations

Response rate fell from 67% in the 2015-2016 UCA Core report to 51.90% in the Fall 2016 report. This drop in participation could be tied to multiple potential causes, including a change in reporting procedures, lack of technology training, or overall uncertainty of course placement in the UCA Core.

In viewing the overall data, there is a clear disconnect between lower division and upper division rubric reporting. This disconnect makes it impossible to demonstrate value added over time or to run correlational statistics.

Faculty scoring improperly is also readily apparent in the data, as demonstrated by lower division students scoring at 3+ on the rubric, while upper division students are scoring less than 2. This, too, can potentially be linked to training and lack of calibration.

Conclusions

Given the inability to run correlational statistics, and the issues with the data reliability, these assessment results support the UCA Core Council's decision to move forward with the modified assessment procedure. Given no specific area for improvement has been identified, the improvement team should wait for the results of the 2016-2017 Responsible Living Assessment that is scheduled for Fall 2017.
