	6	6	Total for year = 12

*Must be taken in spring of second year. **To ensure that all students get sufficient Assessment and Integrated Health Care (IHC) Experience: (a) all students are required to complete a minimum of five integrated psychological testing reports before application for pre-doctoral internship. Such a report should include a review of history, results of an interview and at least two psychological tests from one or more of the following categories: personality measures, intellectual tests, cognitive tests, and neuropsychological tests (checklists or symptom measures, such as the BDI or SCID-IV, do not count). Students should be aware that certain pre-doctoral internship programs such as VA and medical centers may require completion of more integrated assessment reports. (b) All students are required to complete at least one practicum in an IHC site (the IHC site may be a secondary site, with a minimum of one half-day). Be sure and talk to your advisor and the Director of Training about changes in sequencing from semester-to-semester.
